ABOUT ME

For a long time I have been interested in Web Development, but only a few years ago I had the chance to actually study programming and use my coding abilities in real life projects. What started as a challenge and more or less out of curiosity grew into me and quickly became a full-time passion. Developing apps I'm challenged constantly to use and improve my creativity, analytical thinking and problem-solving skills. I'm interested in a Junior Web Developer position (front-end, back-end or full-stack) and I am open to learn/ code in any programming language and framework. If you are on a search for a colleague who is serious, organized, team player and eager to learn new things, do not search any further.
